

Ascom care coordination solution for acute care

It's all about better outcomes

The Ascom care coordination solution empowers clinicians. It makes it easy to access and share context-rich clinical data. It enables medical staff to request assistance from colleagues while on the move. It helps ensure coordination between colleagues and the resources needed for optimum care delivery.

Key benefits

The ability of the solution to quickly share alerts and clinical data with colleagues, and to coordinate appropriate responses, offers numerous benefits to patients and clinicians:

- It can help optimise response times to critical patient events. Clinicians can quickly assess situations and can summon appropriate support¹
- Patient information and clinical data is securely delivered to built-for-healthcare handsets. Key staff members are kept in the loop, wherever they are in a facility
- Clinicians can access and upload data to Electronic Patient Records (EPRs) while on the move. Workflows are smoother, with less documentation and paper-based administration²
- Clinical data goes to medical staff - not vice versa. Staff can access data (in the form of messages, voice, images, videos, waveforms, charts) without walking to nurse stations or stationary displays
- It reduces clinicians' exposure to non-clinically significant alerts, which can help reduce their cognitive burden³

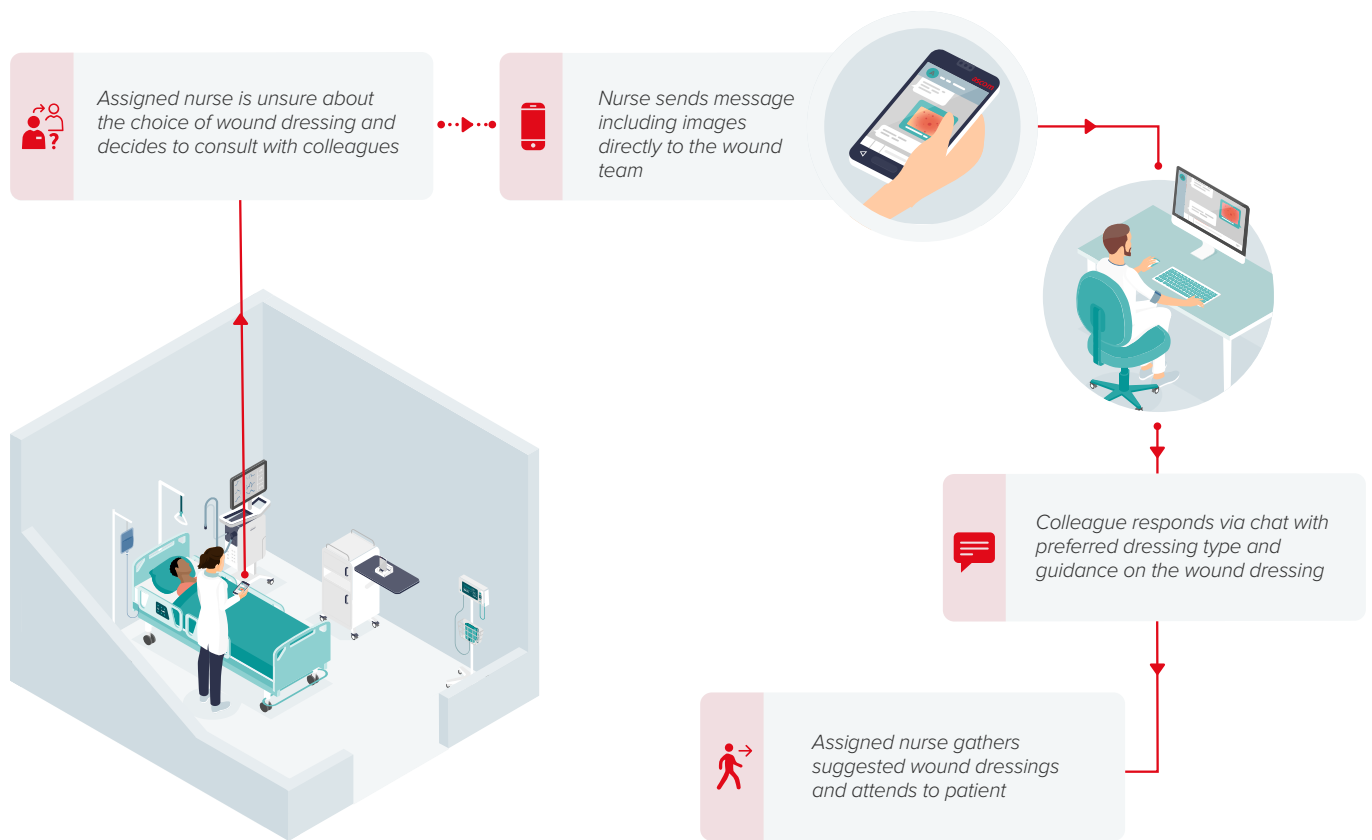

Care coordination on your terms

Each Ascom care coordination solution is unique - tailored to a specific site or unit. Whatever the needs for your hospital, we ensure the solution is interoperable with your existing or planned communication systems and infrastructure.

Solution components

An Ascom care coordination solution typically includes modules from our software suite, as well as enterprise-grade handsets that include everything from the Android Enterprise Recommended* Myco smartphone to a wide range of DECT and VoWiFi phones and pagers.

Workflow example - wound assessment

“The principal values for Tyks Lighthouse Hospital include a customer-oriented approach, family-centred care and patient safety. By means of functional planning, we can make sure that the values are not just empty words but they are a concrete part of the daily operations of the hospital, the quality of service and patient experiences.”

Annika Lindblom

Hospital Planner at Turku University Hospital

“The Ascom solution allowed us to make the patients visible to the nurses, no matter where they were in the building.”

Natalie Forrest

Former CEO, Chase Farm Hospital London

Your challenges

All too often, clinicians use multiple tools in order to coordinate care delivery and responses. This can involve calling, paging, passing written messages, walking to nurse stations and so on. It is a fragmented, reactive process that wastes time and can compromise patient safety.⁴

Common care coordination issues include:

- Double documentation and its associated risks of transcription errors
- Time lost contacting colleagues, often because of fragmented clinical directories
- Staff unnecessarily exposed to nuisance alerts, which can be disruptive in patient care
- Sub-optimal handover routines that can result in insufficiently briefed staff, diagnosis errors and treatment delays⁵

Features and benefits

- Proven and deployed at thousands of facilities worldwide
- Fully open and interoperable with most medical devices and healthcare communication systems on the market
- A unique end-to-end solution that includes everything from initial workflow assessments with Ascom Clinical Consultants to tailored Solution Lifecycle Plans and training
- The solution is scalable, from small specialist departments to multi-site healthcare estates
